Cycle Safety

In 2020, 16,294 cyclists were injured in reported road accidents. Safety is at the heart of everything Speedy does.

We always look for innovation and together with FHOSS we fitted the FHOSS Cycle Lane illuminated early warning system to all HGVs in our fleet.

FHOSS Field

The Field Pedestrian Detection Zone combines next-generation exclusion zone technology with advanced AI detection algorithms that pick up human silhouettes, to create a full pedestrian safety system.

During all reversing manoeuvres and unfolding of beavertail ramp, any pedestrians that break the FHOSS field zone alerts the driver on the screen and audio “caution pedestrian”
